A;Reference number: A93204; A;Accession: C01937 genetic information may produce 4; MUID:79073152; PMID:103003 immunoglobulin diversity.

A; Nolecule type: protein
A; Residues: 1-111 <WEI>
C; Complex: An immunoglobulin heterotetramer subunit consists of two
hain disulfide bonds. In some cases, such as IgA and IgM, the subunit
hain disulfide bonds in some cases, such as IgA and IgM, the subunit consists of two
hain disulfide bonds. In some cases, such as IgA and IgM, the subunit hain disulfide bonds in some cases. subunits identical light associate

A, Title: Rearrangement of genetic information may produce immunoglobulin diversity.
A, Reference number: A93204; MUID:79073152; PMID:103003
A, Accession: E01937
A, Molecule type: protein
A, Residues: 1-11 (MEI)
C, Complex: An immunoglobulin heterotetramer subunit consists of two identical light (k hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into C, Superfamily: immunoglobulin V region; immunoglobulin homology
C, Keywords: heterotetramer; immunoglobulin
C, Keywords: heterotetramer; immunoglobulin

The scFv was obtained by PCR amplification of cDNAs for CC 198/AB2 VH and VL regions and cloning in vector DAP2. 198/AB2 is CC an example of anti-human Factor IX (FIX)/activated Factor IX (FIXA) and their derivatives, CC ancibodies of the invention. Anti-FIX/FIXA and their derivatives, CC activity or FIXA activating activity. Administration leads to an increase in the proceagulant activity. Administration leads to an increase in the proceagulant activity of FIXA, even in the presence CC in the absence of FVIII or FVIII, and in the case of FVIII or FVIII or FVIII and their case of FVIII or FVIII and their case of FVIII or FVIII and their case of FVIII or FVIII and the case of FVIII or The antibodies and derivatives are used in a CC claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic

                                                                                                                                                                                                                                                                                            The present sequence is that of a fusion protein comprising: a PelB CC leader; a single chain Fv (scFv) derivative of antibody 198/B1 CC leader; a single chain Fv (scFv) derivative of antibody 198/B1 cc comprising the heavy (VH) and light (VL) chain variable regions of CC 198/B1 joined by an artificial, flexible linker peptide; a spacer; and a C-terminal 6His affinity tail.

CC 198/B1 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIX) antibodies of the invention. Anti-FIX/FIXa antibodies and their derivatives, including scFv fragments, have FVIII a cofactor activity or FIXa activating activity. Administration leads to an increase in the procoagulant activity of FIXa, even in the presence of FVIII inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies and derivatives are used in a claimed patients. The activity especially haemophilia A and haemorrhagic coagulation disorders, especially haemophilia A and haemorrhagic athathed surrelives activity.
                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                 exhibited FVIII-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as haemophilia A and haemorrhagic diathesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2001-290358/30.

AAB20437
The present sequence is that of a fusion protein comprising: a PelB leader; a single chain Fv (scFv) derivative of antibody 198/B1 comprising the heavy (VH) and light (VL) chain variable regions of 198/B1 joined by an artificial, flexible linker peptide; a spacer; Escherichia coli alkaline phosphatese; and a C-terminal 6His affinity tail. 198/B1 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIXa) antibodies of the invention. Anti-FIX/FIXa antibodies and their derivatives, including scFv fragments, have FVIIIa confactor activity or FIXa activating activity. Administration leads to an increase in the procoagulant
                                                                                                                                                   New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as haemophilia A and haemorrhagic diathesis
                                                                                                                                Example 16; Fig 26; 138pp; English.
                                                                                                                                                                                                                                        Scheiflinger F,

This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic diathesis. The scFv-alkaline phosphatase was expressed in E. coli. It exhibited FVIII-like activity.

The protein was expressed in Becherichia coli from plasmid pEjp398AE#102 (see AAF30728). Antibody 198/B1 is an example of anti-human Factor IX (FIX)/Activated Factor IX (FIXa) antibodies of the invention. Anti-FIX/FIXa antibodies and their derivatives have FVIIIa cofactor activity or FIXa activating activity. Administration leads to an increase in the procoagulant activity of FIXa, even in the presence of FVIII inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitors The antibodies and derivatives are used in a colaimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic distributive. The bivalent miniantibody exhibited FVIII-11ke

                                                                                                                                                                                           CC The present sequence is that of a single chain Fv (scFv) derivative CC of antibody 198/A1, comprising the heavy (VH) and light (VL) chain CC variable regions of 198/A1 joined by an artificial, flexible linker CC peptide. The scFv was obtained by PCR amplification of cDNAs for CC 198/A1 VH and VL regions and cloning in vector pDAP2. 198/A1 is CC an example of anti-human Factor IX (FIX) /activated Factor IX (FIX) (CC antibodies of the invention. Anti-FIX/FIXa and their derivatives, CC including scFv and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor CC activity or FIXa activating activity. Administration leads to an increase in the procoagulant activity of FIXa, even in the presence CC of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic CC diathesis.
                                                                                                               Matches
                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to identifying differences (I) in mammalian specie specific surface amino acid residues on an immunoglobulin which converts the antigenicity of a first mammalian species to a second mammalian species. The new method is used for identifying and replacing immunoglobulin surface amino acid residues which converts the antigenicity of a first mammalian species to that of a second mammalian species. The method simultaneously reduces the immunogenicity and strictly preserves ligand binding properties. The replacement of exterio amino acid residues has no effect on the ligand binding properties but greatly alters immunogenicity. The present sequence is that of a PCR primer used in the construction of the "veneered" 194 heavy and light chain variable regions plus those necessary to fuse the human signal and that of the moves 194 light which these variable regions. The present sequence is
           Monoclonal antibody; MAb; heavy chain; light chain; constant region; variable region; amplification; primer; polymerase chain reaction; PCR, chimera; 1g; immunoglobulin; humanised antibody; leucocyte; integrin.
                                                                                                                           25-MAR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A humanised monoclonal antibody corresponding to the murine anti-CD18 cantibody 60.3 was prepared. The variable (V) region sequences from CC both the heavy (H) and light (L) chains were determined from cDNA CC (amplified by PCR), and spliced onto human constant (C) regions, CC expressed in tissue culture (Ag8.653 mouse myeloma cells, detected by ELISA), and examined in binding assays. The results from CC competition and inhibition assays showed that the chimeric Ab was CC case effective as the murine 60.3 MAb. The deduced murine VH and VL protein sequences were compared to the protein sequence data base, CC cand two human Ig protein sequences were selected to be used as complates. A murine 60.3 Fv was modeled according to the deduced CC VH and VL protein sequences selected from the 60.3 Fv model and the two human template sequences selected from the protein data base, a CC human template sequences selected from the protein data base, a CC humaning the entire V region) to form the VH and VL. These were compared to the corresponding to the deduced corresponding the entire V region) to form the VH and VL. These were compared to the humanised Ab (IgGI, kappa). The humanised proteins were again condicated that the humanised Ab recognised cells expressing CD18. Candidated that the humanised Ab recognised cells expressing CD18. Candidated that the humanised 60.3 Ab master wells were transferred and candidated for To.
                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                         infarction, acute kidney failure, chronic rheumatism, cardiac shock, pancreatitis, adult respiratory distress syndrome and colitis. The antibodies were generated by immunising Balb/C mice with recombinant human type II phospholipase A2. Spleen cells from the mice were fused with mouse myeloma P3UI (P3x63Ag8.UI) and the hybridomas obtained were screened for phospholipase A2 inhibitory activity. Active clones were isolated including 12H5, 1.4 and 10.1. These were cultured and the antibody isolated from the culture supernatant by precipitation with ammonium sulphate and purification on a column of protein A-Sepharose C14B. Because the antibody acts on the primate and mouse forms of enzyme as well as human it is particularly suitable for preclinical testing.

The CC present invention describes a novel method for the amelioration of CC kidney disorders (such as acute renal failure) associated with the cadministration of cisplatin for the treatment of cancer. The method CC comprises treatment with a monoclonal antibody which inhibits the cc activity of type II phospholipase A2 (particularly of type II (phospholipase A2 of human origin), or with a protein or peptide (possessing the same inhibitory activity and containing a part of the cantibody sequence. Preferably the antibody also inhibits the activity of ape and/or mouse type II phospholipase A2, and has the ability to release type II phospholipase A2 bound to a cell membrane. Three specific monoclonal antibodies having these properties which can be used are 12H5, 10.1 and 1.4, derived from hybridomas FERM BP-5300, CC suppressing the nephrotoxicity which is a characteristic feature of cisplatin administration, and therefore allowing more efficient use of this drug as an anticancer agent, e.g. by allowing an increased dosage contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the contents of the content
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

CC solubility to an antibody comprising these peptides. The peptides or L-FR4 cresent within a variable region of an antibody which makes the antibody cosluble and stable in cytoplasm. Peptides having the sequences of HFR1 to entibody. CC entibody, covalently linked to the H-CDR1, H-CDR2) - (H-FR2) - (H-CDR1) - (H-FR2) - (H-CDR2) - (H-FR3) - (H-CDR3) - (H-CDR3) and cc entibody, covalently linked to the H-CDR1, H-CDR2, H-CDR3 in the oxder cc (H-FR1) - (H-CDR1) - (H-FR2) - (H-CDR2) - (H-FR3) - (H-CDR3) - (H-CDR3) and cc entibody, covalently linked to the H-CDR3 in the oxder cc (H-FR2) - (L-CDR2) - (L-CDR2) - (L-CDR3) - (L-CDR3) - (H-FR3) - (L-CDR3) - (L-FR1) - (L-CDR2) - (L-CDR2) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR1) - (L-CDR2) - (L-CDR2) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR1) - (L-CDR2) - (L-CDR2) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR1) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR3) - (L-CDR4) - (L-FR1) - (L-CDR1) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR3) - (L-CDR4) - (L-CDR1) - (L-CDR1) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2) - (L-CDR2)

                                                                                                                                                                                                                   皮
                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to peptides which are able to confer stability and CC solubility to an antibody comprising these peptides. The peptides CC are especially H-FR1, H-FR2, H-FR3, L-FR4, L-FR4, L-FR2, L-FR3 or L-FR4 CC present within a variable region of an antibody which makes the antibody CC soluble and stable in cytoplasm. Peptides having the sequences of HFR1 to CH-FR4 are present within the variable region of the heavy chain of an CC (H-FR1)-(H-CDR1)-(H-FR2)-(H-CDR2)-(H-FR3)-(H-CDR3)-(H-CDR3)-(H-CDR4) and CC peptides having the sequences of L-FR1 to L-FR4 are present within the variable region of the light chain of an antibody. Covalently linked to the H-CDR3, H-CDR3)-(H-CDR3)-(H-CDR4) and CC inked to the L-CDR1, L-CDR3, H-CDR3)-(L-CDR3)-(L-CDR4)-(L-CDR1)-(CC L-FR2)-(L-CRR3)-(L-CDR3)-(L-CDR4)-(L-CDR1)-(CC CC L-FR2)-(L-CDR3)-(L-CDR3)-(L-CDR4)-(L-CDR1)-(CC CC L-FR2)-(L-CDR3)-(L-CDR3)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L-CDR4)-(L

peptides having the sequences of L-FR1 to L-FR2 are present within the variable region of the light chain of an antibody, covalently linked to the L-CDR1, L-CDR2, L-CDR3) in the order (L-FR1)-(L-CDR1)-(L-FR2)-(L-CDR2)-(L-CDR3)-(L-CDR3)-(L-CDR3)-(L-CDR4). The antibodies and polynucleotides (e.g. by gene therapy) are useful for the manufacture of a medicament for the treatment of pathologies associated with accumulation of a molecule inside or outside a human, animal cell or plant cell. The pathologies are infections (e.g. viral infections as HIV, human immunodeficiency virus, infections, tumour, metabolic a humune (especially auto-immune) pathologies. The present sequence represents the synthetic antibody scfv(FB) which is used as a basis for constructing synthetic antibodies incorporating the peptides of the nvent one
                                                                                                                                                                                                                                                      The invention relates to peptides which are able to confer stability and solubility to an antibody comprising these peptides. The peptides are especially H-FR1, H-FR2, H-FR3, H-R4, I-FR1, L-FR3 or I-FR4 present within a variable region of an antibody which makes the antibody soluble and stable in cytoplasm. Peptides having the sequences of HFR1 to H-FR4 are present within the variable region of the heavy chain of an antibody, covalently linked to the H-CDR1, H-CDR2, H-CDR3 in the order (H-FR1)-(H-CDR1)-(H-CDR2)-(H-CDR2)-(H-FR3)-(H-CDR3)-(H-CDR3) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptides which are able to confer stability and solubility to an antibody comprising these peptides, useful for treating pathologies (e.g. tumour) associated with accumulation of a molecule inside or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2001-502555/55.
